

CPU HOLDER

Installation Instructions

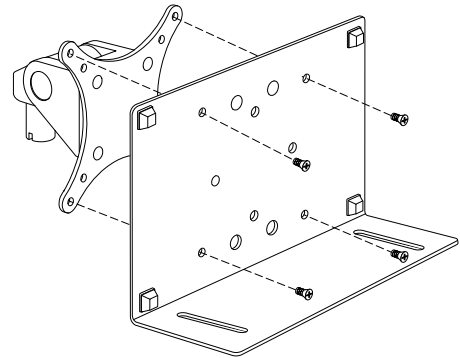

www.ergomart.com | 888 420 3200

1

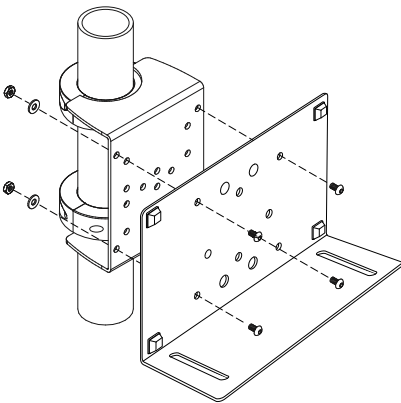

Use the fasteners to secure the front plate of the CPU holder to the back plate. In many cases the back plate may need to be mounted prior to attaching the face plate, using one of the following methods.

2

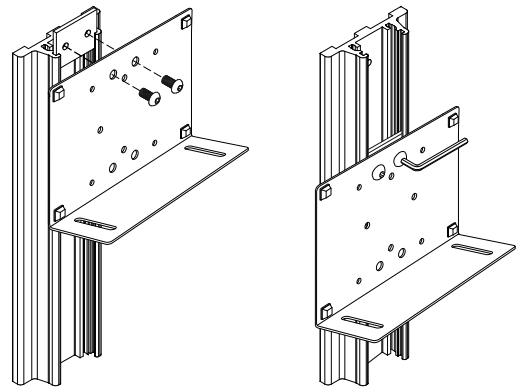

The back plate can be mounted directly to a vertical surface (using fasteners provided by customer) or, as pictured, the back plate can be attached directly to a Vesa plate on the tilter head. Attach face plate as in Step 1.

3

To pole mount, attach the backplate to the universal mounting bracket, using provided fasteners. Then attach the face plate as in Step 1.

4

To track mount, thread the bolts through the backplate and into the slider plate a few threads. Once in preferred position, level the plate and tighten the bolts to secure the plate to the track. Attach the front plate as in Step 1.
